

Company/Idea name: Power Algae OÜ

Field: biotechnology

Short description: Power Algae Ltd. offers technology for growing microalgae (Chlorella, Spirulina, etc.) in photobioreactors. With small modifications, the modular photobioreactor system can be used for microalgae farming as well as a bio-filter, capturing carbon dioxide from flue gas.

Cooperation interests:

- collaboration with utilities, who emit CO₂ and are obliged to buy carbon emission quota
- collaboration with research institutions or prospective alga-preneurs, who want to grow microalgae
- sale of nutrition-rich microalgae feed for poultry and fish farming
- sale of nutrition-rich microalgae (Chlorella, Spirulina, etc.) human food supplements
- sale of nutrition-rich microalgae (Chlorella, Spirulina, etc.) as an ingredient for food industry
